

Making Inventory Easy with Direct Integration to the ERP System

ACCU-DART Case Study

Dairytown Processing Ltd is a Dairy Manufacturing operation in Sussex, New Brunswick. After manufacturing goods, all finished-goods inventory and its components, bin tracking, and lot tracking information was manually recorded into Sage 300 ERP or into an Excel spreadsheet. Typically this could not be achieved until the day after production was counted and verified, resulting in numerous data entry errors. They wanted to find an easy inventory solution that would update their ERP system in real-time.

Because Dairytown Processing Ltd already had an ERP system that was able to track and process day-to-day information needed for them to operate a successful business. They were comfortable working with Sage 300 ERP, and didn't want to have to start over, learning a whole new system. Because of this, they turned to their ERP reseller – DB Group Consulting – for advice on how to improve their inventory processes. They recommended ACCU-DART.

ACCU-DART is a real-time inventory control solution designed to integrate directly with the ERP system. Using radio-frequency scanners, the warehouse/manufacturing staff scan, validate, and update inventory

Client:

Dairytown Processing Ltd.

Location:

Sussex, New Brunswick

Type of Business:

Dairy Manufacturing

Reseller:

“Choosing ACCU-DART... eliminated the manual data entry process by having the warehouse employees scan and post information in real-time.”

- DB Group Consulting, Inc.

transactions in real-time, ensuring that all users throughout the organization have the most up-to-date information. Because ACCU-DART integrates directly with the ERP system, there is no second database to maintain, no additional information to reconcile.

DB Group Consulting “felt that choosing the ACCU-DART system – which simply eliminated the manual

data entry process by having the warehouse employees scan and post information in real-time – was better than implementing a whole new system with new processes.” ACCU-DART was also customized to offer a “one-scan” feature, in order to minimize the prompts requested. Dairytown Processing Ltd opted to use a single barcode to represent item number, quantity, and lot number. By scanning this one barcode, all the information is validated and updated in the ERP system.

Software implementation was quickly and easily completed. Training the warehouse employees on their new process was also quick. This was greatly due to the customized “one-scan” feature, making it even easier for warehouse staff to process transactions.

“ACCU-DART enabled Dairytown Processing Ltd to have an accurate real-time inventory of finished goods, as well as record all their bin and lot tracking needs directly into Sage 300 ERP, while reducing the time-consuming manual data entry and processing procedures that were once in place.” Said DB Group Consulting.

The ability to validate and update inventory data in real-time to the existing ERP solution has allowed Dairytown Processing Ltd to improve accuracy, save valuable time, and reduce errors.

About DB Group Consulting Inc.
