Improved Inventory Accuracy
with Customized ACCU-DART Solution
ACCU-DART Case Study

Paramound Die is the leading designer and manufacturer of wire drawing die inserts and tooling systems for the wire drawing industry. Inventory items are often very small in size. Tracking the movement of inventory items incoming and outgoing, as well as within the facility was difficult. Additionally, inventory is stored in custom packaging - with both metric and imperial sizes - which makes it incredibly easy for warehouse staff to make mistakes when reading the labels.

In search of a better way to manage their inventory, Paramount Die rcontacted their AccountMate reseller, Profit Programming Inc. They immediately recognized the need to contact Irwin Ash, the creator of ACCU-DART. "Irwin Ash is well-known in the AccountMate community as an expert in warehouse management as well as the use of barcode scanners to manage inventory issues". With years of expertise in inventory control, Irwin understands how warehouses "should" operate for optinmal efficiency.

ACCU-DART is a real-time inventory management solution, designed to integrate directly with AccountMate. Using radio-frequency scanners, ACCU-DART allows the warehouse staff to validate and update inventory transactions in real-time, allowing all users throughout the organization to have the most up-to-date

information. ACCU-DART validates in real-time that the correct item is being picked for each transaction, eliminating errors that can be made by reading the confusing labels and manually entering the data at a later time.

Initially, Paramount Die Inc. selected from ACCU-DART's wide variety of standard modules, but quickly realized that their unique operations required custom solutions. They said: "We started with the basics, and have built on that to tackle increasingly complex problems". This includes custom solutions from ACCU-DART to solve individual challenges inside the facility. As the lead programmer and creator of ACCU-DART, Irwin Ash is able to engineer any customizations the client needs to solve their unique buiness issues.

With ACCU-DART in place, Paramount Die Inc. has significantly reduced inventory errors inside their facility. They report: "The number one improvement has been in shipping accuracy. These items are easy to confuse when reading labels with the eye. This resulted in many errors in shipments. Using the ACCU-DART shipping module - customized to this application - has reduced shipping errors to almost zero."

Thanks to the expertise of Irwin Ash and the ACCU-DART team, Profit Programming Inc was able to deliver to their client an accurate, real-time inventory solution that was customzied to fit thier unique needs.

About Profit Programming Inc.

Since 1974, Profit Programming Inc. has been helping companies maximize their IT investments to reduce costs and improve service to their customers. Today, customer service is enterprise-wide and beyond, demanding immediate response to inquiries; efficient logistics throughout the entire order process; and responsive customer service after the sale. Our mission is to enable you to provide this demanding level of customer service.

We are experienced in a range of technologies, including Progress OpenEdge, Microsoft .Net, Microsoft SQL Server, Visual FoxPro and current mobile technologies. We have 40 years of experience using proven technologies to help companies solve business problems.

About ACCU-DART

Executive Concepts Inc was founded in 1988 and based in Ontario, Canada. They developed ACCU-DART, a real-time inventory control solution designed specifically for a customer's accounting or inventory system. ACCU-DART's radio frequency, bar code solution is designed to leverage the power of your existing system by providing the warehouse or shop floor with wireless technology.
